Jathnier Corporation

Ruby St. RGA Village Brgy. Paciano Bangoy Davao City

Job Description

Job Title: Quality Assurance and Quality Control Officer (QA&QC)	
Department: Davao Baking Center	**Division:** DBC
Job Family: Davao Baking Center	**Location:** RGA
Reports to: Production Manager	**No. of Direct Subordinates:** 0
	No. of Indirect Subordinates: 0

Job Summary

The QA&QC Officer is responsible for ensuring that products or services meet established quality standards and specifications by monitoring, inspecting, and testing production processes and outputs. He/ she reviews quality testing policies and procedures to ensure that regulatory standards in food manufacturing are followed.

Job Brief:
As a QA&QC Officer, you will assess product or service quality, identify defects or deviations from standards, and implement corrective actions to maintain or improve quality levels. You perform inspections, audits, and tests to verify compliance with quality requirements and customer expectations.

You are familiar with good laboratory practices (GLPs) and good manufacturing practices (GMPs). You are familiar with regulatory requirements and guidelines in food safety management and control, such as ISO standards and Hazards and Critical Points (HACCP) system.

Primary Duties & Responsibilities	Frequency	100%
1. Develop and implement quality control processes, procedures, and guidelines to ensure consistency, reliability, and compliance with quality standards and regulations.	Daily	10
2. Conduct inspections and audits of production processes, materials, components, and finished products or services to identify quality issues, defects, or non-conformities.	Daily	10
3. Review Baker's Guide, product specifications, and other technical documents to understand quality requirements, tolerances, and acceptance criteria for products or services.	Daily	10
4. Perform visual inspections, measurements, and tests using precision tools, equipment, and instruments to verify product dimensions, appearance, and functionality.	Daily	10
5. Document and report quality findings, deviations, and corrective actions taken, maintaining accurate records, logs, and inspection reports for traceability and accountability.	Daily	10
6. Train and educate production staff on quality control processes, procedures, and best practices, fostering a culture of quality awareness, accountability, and continuous improvement.	Daily	10
7. Participate in product development and validation activities, providing input on design reviews, risk assessments, and validation protocols to ensure product quality and reliability.	Daily	10
8. Coordinate with external auditors, customers, and regulatory agencies during quality audits, inspections, or certifications, providing documentation and support as needed.	As necessary	10
9. Conduct supplier quality assessments and inspections, evaluating supplier performance, capabilities, and adherence to quality standards, and communicating feedback to suppliers.	As necessary	10
10. Implement quality assurance tools and techniques, such as statistical process control (SPC), Six Sigma, or lean manufacturing principles, to monitor and improve process performance and product quality.	Daily	10

Job Description

Organizational Relationships

Direct Supervisory Responsibility

1. The QA&QC Officer entails monitoring and inspecting the quality of materials (RMPM), products, and services.
2. Review and approve standard operating procedures (SOPs) and plans, ensuring alignment with regulations, guidelines and policies.
3. Q&QC Officer determines if production outputs are within specifications or by the customer's order.
4. Determine the reliability of inspection equipment by calibrating them regularly
5. Quality control supervisors make recommendations on the resumption of production after repairs.
6. Responsible for developing methods and techniques to ensure effective quality of products and services
7. Maintain a record of quality defects, product reliability, and customer complaints.
8. Evaluate corrective action taken by other company employees to prevent the recurrence of the same problem in the future.
9. Ensure that regulatory requirements are met at all times and that all employees are familiar with all quality standards, principles, and procedures as required by government agencies, customers, and other company departments, such as finance, HR, and administration.
10. Ensure that all employees are aware of the appropriate procedures to follow to avoid causing confusion and delays in the production process.

Internal Relationships

1. Inspection and Testing: Oversee the inspection and testing of materials, parts, and products to ensure they adhere to established quality standards.
2. Quality Control Systems: Develop, implement, and manage quality control systems to ensure continuous production of high-quality products.
3. Collaboration: Coordinate with the production manager to identify and resolve quality issues during the manufacturing process.
4. Documentation: Review quality documentation necessary for regulatory submissions and inspections.
5. Team Management: Train, supervise, and evaluate the performance of quality control staff.
6. Data Analysis: Analyze data from quality testing to identify trends, root causes of issues, and areas for improvement.
7. Audits and Compliance: Facilitate audits and inspections by external bodies, ensuring compliance with industry regulations and standards.
8. Corrective Actions: Implement corrective and preventive actions based on internal or external audit findings.

External Relationships

1. A QA&QC Oficer makes sure that all approved suppliers are properly issued with orders on time and in full compliance with company's quality standards, principles, procedures, and government regulations.
2. They are responsible for ensuring strict adherence to all company procedures and policies before issuing an order to a supplier.
3. Make sure all suppliers are duly registered by the company before undertaking any of the activities relating to the procurement of raw materials, components, parts, or finished products.
4. They must ensure that only parts 9machine or equipment) and materials, components, and products, that meet the company's quality standards and specifications requirements are accepted.

Type of Structural Authority

Responsibility

☑ Coordinating

☐ Non-Coordinating

Job Description

Education, Experience & Competencies

BS in Food Technology, BS in Chemical Engineering; BS in Chemistry; BS in Food Science; BS in Food and Nutrition; or its equivalent field.

Experience

At least 2 years of proven experience in quality control, quality assurance, or quality management roles, preferably in a manufacturing or production environment.
Familiarity with quality standards, regulations, and requirements applicable to the industry, such as FDA regulations, ISO standards, and customer-specific quality requirements.

Competencies

Core Competencies	Proficiency Level		
	Basic	Competent	Advanced
1. Quality Assurance Processes: Develop and implement quality control processes, procedures, and guidelines to ensure consistency, reliability, and compliance with quality standards and regulations.			
2. Inspections and Audits: Conduct inspections and audits of production processes, materials, components, and finished products or services to identify quality issues, defects, or non-conformities.			
3. Documentation and Reporting: Document and report quality findings, deviations, and corrective actions taken, maintaining accurate records, logs, and inspection reports for traceability and accountability.			
4. Regulatory Compliance: Monitor adherence to quality standards, work instructions, and regulatory requirements throughout the production process, ensuring compliance with ISO, FDA, or industry-specific quality standards.			
5. Technical Understanding: Review specifications, blueprints, and technical documents to understand quality requirements, tolerances, and acceptance criteria for products or services.			
6. Precision Testing: Perform visual inspections, measurements, and tests using precision tools, equipment, and instruments to verify product dimensions, appearance, and functionality.			
7. Training and Education: Train and educate production staff on quality control processes, procedures, and best practices, fostering a culture of quality awareness, accountability, and continuous improvement.			

Functional Competencies	Proficiency Level		
	Basic	Competent	Advanced
1. Willingness to be open to learning and growing.			
2. Maturity of judgment and behavior.			
3. Attention to detail.			
4. Remains flexible under pressure.			
5. Ability to work well with other managers.			

Behavioral Competencies	Proficiency Level		
	Basic	Competent	Advanced
1. Time management			
2. Remains flexible under pressure			
3. Teamwork			
4. Maintains a positive attitude.			
5. May perform other duties and responsibilities as assigned.			

Job Description

Key Performance Measures
1. Defect Rate: This measures the percentage of products or services that fail to meet quality standards and require rework or correction.
2. Customer Satisfaction Index (CSI): Assess customer satisfaction through surveys, feedback, and ratings. Happy customers indicate effective quality control.
3. First Pass Yield (FPY): Calculate the percentage of products passing inspection without rework. Higher FPY indicates effective quality control
4. Cycle Time for Quality Assurance: Monitor the time it takes to complete quality checks. Faster cycle times improve efficiency and reduce delays

Working Environment & Conditions
1. Handling Customer Complaints: Investigating customer complaints related to product quality, they determine the cause of the problem, and implement solutions to prevent recurrence.
2. ISO Standards Compliance: By auditing and reviewing operational procedures against international benchmarks, Quality Control Officers ensure products and processes adhere to specific standards.
3. Root Cause Analysis: By dissecting production processes and product failures, Quality Control Officers pinpoint the origins of quality issues. This analytical method aids in the prompt correction of problems and promotes a preventive approach to quality management within the production and distribution outlets.
4. Continuous Improvement Methodologies: A systematic approach to evaluating and enhancing processes, products, and services enables the identification and rectification of inefficiencies. Implementing solutions that lead to quality enhancements, Quality Control Officers proactively address potential issues, cultivating a culture of excellence and efficiency.
