GMP Checklist

Deapartment/ Section : _____ Date : _____

Rate each item from 0 to 1. 0- Not complied 1-Complied

	Product (2 points)	Rating	Remarks
1	The food been manufactured under such conditions that is fit for food.		
2	The food been prepared, packed, or held under sanitary conditions whereby it may not have become contaminated with filth, or whereby it may not have been rendered injurious to health.		
	Facilties and Grounds (33 pints)		
3	The grounds about your plant under your control kept in a condition that will protect against the contamination of food.		
4	Areas within the vicinity of the plant kept free from litter and waste with grass and weeds trimmed.		
5	Roads, yards and parking lots maintained to prevent sources of contamination.		
6	There is adequate drainage of outside areas that may contribute to contamination.		
7	Systems for waste treatment and disposal operated in a manner to protect against contamination.		
8	There are steps taken to prevent sources of food contamination from bordering grounds not under the control of the facility.		
9	There is adequate lighting in all dressing and locker rooms and toilet areas.		
10	There is adequate lighting in all areas where food is processed, packed, or stored and where utensils and equipment are cleaned.		
11	There are safety-type light bulbs, fixtures, or other glass suspended over areas where food is exposed provided to protect against food contamination in case of glass breakage.		
12	The plant buildings and structures of suitable size, construction, and design to maintain sanitary operations and to produce safe food.		
13	The plant building provide sufficient space for placement of equipment and storage of materials to permit maintenance of sanitary operations and production of safe food.		
14	The design of the plant permit the separation of operations in which contamination is likely to occur which may include a separation of operations by location, time, space, partition, air flow, or other effective means.		
15	Floors, walls and ceilings constructed to facilitate adequate cleaning and repair.		
16	Drip or condensate from fixtures, ducts and pipes cause or potentially cause contamination of food, food contact surfaces or food packaging materials are being prevented.		
17	Aisles and working spaces unobstructed and of adequate width to permit employees to perform their jobs and protect against contamination.		
18	Buildings, physical facilities, fixtures, etc. maintained in a good state of repair.		

19	Plumbing of adequate size and design to: carry sufficient quantities of water to required locations; properly convey sewage and liquid disposable waste from the plant; provide adequate floor drainage; and prevent backflow or cross connections between piping systems carrying fresh and waste water or sewage.		
20	Sewage disposal made into an adequate sewage system.		
21	Waste material stored and disposed of in a proper manner.		
22	The facility's water supply sufficient for the intended operations and from an adequate source.		
23	Water used in processing food or cleaning equipment safe and of adequate sanitary quality.		
24	There is adequate, reasonably accessible toilet facilities.		
25	Toilet facilities maintained in a sanitary condition and in good repair.		
26	Doors to the toilet facilities designed not to open into areas where food is exposed to airborne contamination or have double doors or positive airflow systems.		
27	Hand-washing facilities adequate, convenient, and furnished with potable running water.		
28	Hand-washing facilities furnished with adequate hand cleaning and sanitizing preparations.		
29	Hand-washing stations equipped with sanitary towel service or suitable drying service.		
30	There are readily understandable signs directing employees to wash and, where appropriate, sanitize their hands.		
31	Refuse receptacles constructed and maintained to protect against contamination of food.		
32	There is adequate screening or other protection against pests.		
33	Pests excluded from all areas of the food plant.		
34	Effective measures taken to exclude pests from processing areas.		
35	There are restrictions and precautions to ensure that the use of insecticides and pesticides will not contaminate food, food product surfaces and food packaging material.		
Personnel (12 points)			
36	The management take all reasonable measures and precautions to ensure disease control through medical exam, observation, exclusion, and reporting.		
37	Employees instructed to report health conditions that might contaminate food, food product surfaces or food packaging materials to their immediate superior.		
38	Management take all reasonable measures and precautions to ensure cleanliness through hygienic practices.		
39	Employees trained to protect against contamination of food by properly wearing suitable outer garments, hair nets, mask, etc.		
40	Employees trained to maintain adequate personal cleanliness.		

41	Employees trained to wash hands thoroughly before work and after each absence from their work station.		
42	Employees trained to remove unsecured jewelry and other objects that might fall into food.		
43	Gloves used for food handling made of an impermeable material and maintained in a clean sanitary condition.		
44	Employees trained to store clothing or other personal belongings away from areas where food is exposed or where equipment or utensils are washed.		
45	Employees trained to protect against contamination of food, food contact surfaces, or food packaging materials from microorganisms or other foreign substances.		
46	Personnel responsible for identifying plant sanitation failures or food contamination have the combination of education and experience to produce clean, safe food.		
47	Food handlers and supervisors have appropriate training in proper food handling techniques and food protection principles.		
Equipment (23 points)			
48	All plant equipment and utensils designed to be adequately cleanable and properly maintained.		
49	Equipment designed and constructed to preclude adulteration of food with lubricants, fuel, metal fragments, and contaminated water.		
50	Equipment has been installed in a way that facilitates cleaning of equipment and adjacent spaces.		
51	Food contact surfaces made of corrosion resistant and non-toxic material.		
52	All equipment and utensils properly maintained.		
53	Holding, conveying and manufacturing systems designed in a way to be maintained in a sanitary condition.		
54	Seams on food contact surfaces smoothly bonded or otherwise maintained to minimize growth of microorganisms or accumulation of dirt, food particles, etc.		
55	Equipment taken apart for thorough cleaning as necessary.		
56	Non-food contact surfaces of equipment in the food handling are constructed that it can be kept in a clean condition.		
57	Non-food-contact surfaces cleaned as often as necessary to protect against the contamination of food.		
58	Quick freezer and cold storage compartments fitted with appropriate temperature measuring and/or recording devices to accurately show the compartment temperature.		
59	Instruments and controls for measuring, regulating, or recording temperature, pH, weight, etc. accurate (i.e. calibrated).		
60	Compressed air or other gases mechanically introduced into food or used to clean food contact surfaces or equipment treated to insure that food is not contaminated with unlawful food additives.		
61	Cleaning and sanitizing of utensils and equipment performed in a manner to protect against contamination.		
62	Cleaning compounds and sanitizing agents free from microorganisms and safe for use.		

63	Toxic cleaning compounds, sanitizing agents, and pesticide chemicals used, identified, held, and stored in a manner to protect against contamination of food, food contact surfaces, and food packaging materials		
64	Food contact surfaces including utensils and equipment surfaces cleaned frequently to protect against contamination.		
65	In wet processing, food contact surfaces cleaned and sanitized before use and after any interruption during which contamination could occur.		
66	Single-service items (paper cups, towels, etc.) stored, handled, and dispensed in an appropriate manner.		
67	Sanitizing agents safe and adequate under conditions of use.		
68	Cleaned and sanitized portable equipment with food contact surfaces and utensils stored in a manner that protects them from contamination.		
69	There is adequate ventilation or control equipment to minimize odors and vapors.		
70	Fans and other air blowing equipment located in a manner to prevent contamination of food, food contact surfaces and food packaging		
Processes and Controls (30 points)			
71	Operations conducted in accordance with adequate sanitation principles.		
72	There is an appropriate quality control operation employed to ensure that food is suitable for human consumption and that food packaging material is safe and suitable.		
73	All reasonable precautions taken to ensure that production procedures protect from contamination from any source.		
74	Raw materials or other ingredients contain levels of microorganisms that may produce food poisoning or other disease.		
75	Ingredients that contain microorganisms that may cause disease blanched or otherwise treated.		
76	Raw materials inspected, segregated or otherwise handled as necessary to ascertain that they are clean and ready for use.		
77	All adulterated food either rejected or treated processed to eliminate contamination.		
78	Appropriate chemical, microbial, or extraneous material testing conducted to identify sanitation failures or possible food contamination.		
79	Containers inspected to ensure they do not contribute to contamination.		
80	Raw materials and other ingredients comply with FDA regulations, guidelines, and action levels for poisonous or deleterious substances.		
81	Raw materials and other ingredients, including rework, held in bulk or in containers designed to protect against contamination.		
82	Raw materials held at temperature and humidity levels that prevent food from being adulterated.		
83	Raw materials scheduled for rework identified as such.		
84	Frozen products and other ingredients kept frozen.		
85	There is careful monitoring of physical factors such as time, temperature, humidity, pH and manufacturing operations such as freezing, heat processing, etc..		

GMP Checklist

86	Foods that can support the rapid growth of microorganisms held in a manner to prevent adulteration.		
87	Frozen foods kept at -6.0 °C or below as appropriate.		
88	Measure such as freezing, refrigerating adequate to prevent the growth of undesirable microorganisms.		
89	Work in progress handled in a manner that protects against contamination.		
90	Effective measures taken to protect finished food from contamination by raw materials, other ingredients or refuse.		
91	Equipment, containers, and utensils used to process food constructed, handled, and maintained in a manner that protects against food contamination.		
92	Liquid or dry materials and other ingredients received and stored in bulk held in a manner to protect against contamination.		
93	Metal detector used to detect the inclusion of metal or other extraneous material.		
94	Food, raw materials and other ingredients that are adulterated disposed of in a manner to protect other food from contamination.		
95	Heat blanching, when required, performed in an effective manner and washed, when required, with water of safe and adequate sanitary quality.		
96	Packaging operation protected against contamination by use of safe and suitable material for food containers and packaging materials.		
97	Critical control points identified and controlled for packaging operations.		
98	Ice in contact with food been made from water that is safe and of adequate sanitary quality and manufactured in accordance with GMP.		
99	The storage and transportation of finished food under conditions that protect against physical, chemical, or microbial contamination.		
100	Good Manufacturing Practices have been followed in producing the food.
