## MIS/IT DEPARMENT

**Date** February 21, 2024
**To:** Sir Gabriel Cuaycong
**Subject:** Addition of "Add Item" Button and Data Validation in Store Admin

Dear Sir,

I am writing on behalf of ma'am Riva Head Analyst team to propose enhancements to our store admin interface in order to streamline inventory management processes and improve data accuracy. Below are the requested modifications:

Addition of "Add Item" Button: Implementing an "Add Item" button will empower our analysts to efficiently input ~~any missed~~ new items into our inventory database, thereby ensuring comprehensive inventory records.

Data Validation Features:

Discrepancy Highlighting: Incorporate a feature to highlight discrepancies in the data. Specifically, if the actual count exceeds the total count or if the beginning count is higher than the previous ending count, such data entries should be visibly marked in red font. This will aid in promptly identifying and addressing inaccuracies in inventory records.

Analyst Permissions: Grant analyst-level users the authority to delete data entries in the summary that are not included in the dataset. This capability will facilitate data management and ensure that only relevant information is retained in the system.

STORE APPS:
- Preview Module of SUMMARY WITH NO CALCULATIONS
