Subject: Request For SSD Upgrade to Improved System Performance

Dear Mam/Sir

I would like to bring to your attention the growing demand placed on our systems due to the increasing volume of transactions from branches. Our **front-end applications** such as **WMS, StoreApps, DTRs, and Scheduler**, as well as our **back-end systems** like **StoreApp Admin, Sub-StoreApp, Charges, HRIS, QuickBooks Server, and the Database Server**, are all experiencing performance strain.

We are now processing **millions of records**, especially from high-traffic systems like **WMS**, **StoreApps**, and **QuickBooks**. This volume of data, combined across various platforms, is significantly impacting the overall performance most notably when:

- Branches submit large transactions from WMS and StoreApps simultaneously
- Multiple users access QuickBooks concurrently

Our current setup uses a **5-year-old mechanical hard drive (HDD)**, which is becoming a major bottleneck in our system's responsiveness and reliability. Given the increasing data loads and performance demands, I strongly recommend upgrading to **two 2TB Solid State Drives (SSDs)** configured in **RAID 0 (striping)** for maximum speed and performance.

Solid State Drives offer:

- **Significantly faster read/write speeds** compared to mechanical drives
- **Reduced latency**, improving response time for all users
- **Greater reliability** and lower risk of hardware failure
- Enhanced **efficiency for high-volume, multi-user environments**

The estimated cost per SSD is around **₱3,500 to ₱5,000**, with **Samsung EVO** being a highly recommended brand for its reliability and performance.

This investment will dramatically improve the user experience, reduce delays, and ensure our systems remain capable of supporting our growing operational needs.

Thank you for your consideration.
